- 
- 
- VRCPickup  VRChat 

```
VRChat GameObject VRCPickup
```

- $\square \square \square [1 \square \square \square$
- Capsule $\square 2 \square \square \square \square \square \square \square \square \square \square$
- Box $\square \square \square \square \square$

Diagram illustrating a block cipher structure (likely a Feistel network or similar):

- The input is a 256-bit block, represented as two 128-bit halves.
- The first 128-bit half is processed by a function F , which takes a 128-bit key and a 128-bit input.
- The output of F is a 128-bit block.
- This 128-bit block is XORed with the original 128-bit input (the second half of the 256-bit block).
- The result is the final 128-bit output block.
